

Biodiversity in the Global Food System

Suzuki Akira Hall,
Hokkaido University
N13 W8, Kita-ku, Sapporo

The world population is expected to reach 9.8 billion by 2050. Biodiversity is critical for safeguarding global food security, underpinning healthy and nutritious diets, improving rural livelihoods, and enhancing the resilience of people and communities. Biodiversity issue surrounding global food system will be discussed.

July 24, 2019
10:00-17:30
